a second member movably mounted relative to said first member along a predetermined path; and

a spring biasing said first member relative to said second member; and

a sensor device to detect relative movement between respective first and second members, wherein the spring constant of said spring of said first sensor assembly is different from the spring constant of said spring of said second sensor assembly.

There is no prior art teach or suggest a sensor mat assembly (**claim 34**) for use in a vehicle seat cushion for detecting the presence of an occupant, said assembly comprising:

a mat;

a first sensor assembly mounted at a first predetermined location on said mat, and a second sensor assembly mounted at a second predetermined location on said mat, each of said sensor assemblies including:

a first member;

a second member movably mounted relative to said first member along a predetermined path;

a magnet mounted on one of said first and second members; and

a sensor device mounted to detect the position of said magnet,

wherein the gauss characteristic of said magnet of said first sensor assembly is different from the gauss characteristic of said magnet of said second sensor assembly.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
